Best Analytics Company of the Year

2018 ended well for iOmniscient with Wealth and Finance magazine naming the company as their Best Analytics Company of the Year.

As many big players such as Microsoft and Google begin to deploy Artificial Intelligence over the last few years, the term has gained widespread popularity. However, as the world's oldest independent analytics company, iOmniscient has been evolving this technology for almost two decades with many of its capabilities internationally patented. Hence, the company is able to continue to do what no one else can.

These capabilities include the ability to conduct behaviour analysis in very crowded and complex scenes, to do facial recognition on very low resolution cameras, to inform the nearest appropriate first responder on where to go and what to do, and to understand dwell time using face analytics. With iOmniscient's ongoing investment in analytics technologies, the company continues to remain at the forefront of video, sound, and smell analytics.

iOmniscient's Differentiators

So what makes an analytics company different? The difference between iOmniscient's analytic products and all others is like the difference between a bicycle and an airplane. Both are forms of transportation but If your objective is to get from Dubai to New York you could not do it on a bicycle.

There are over 50 differences between iOmniscient and the other main players but to make the comparison task simpler we suggest you focus on the top few

1. The patented ability to do video analytics in a crowd despite obscuration. And the ability to see the invisible (black objects on a black background).

2. The ability to address sophisticated behaviours such as slips and falls, flood, smoke and fire detection.

3. The ability to count to an accuracy of over 99%.

4. The ability to count in a crowd even when the crowd isn't moving.

5. Nuisance Alarm Minimization System (NAMS) – the ability to minimize false alarms.

9. Patented Automated Response Capability - to find the nearest appropriate responder and tell him where to go and what to do.

10. Smart Compression – reducing storage and network requirements by over 90%.

11. Mobile Control Room – increase productivity by putting the control room on a smart phone.

uncontrolled crowds – without compromising the privacy of citizens.

7. Multilingual License Plate Recognition (LPR) for over 130 countries.

8. The patented ability to do multiple detections and recognitions in quick succession eg detecting an abandoned bag and then recognizing who left it there and tracking him.

See Through the Crowd

12. Industry Packs – solutions for detailed use cases for 30 different industries.

13. Multisensory Analytics - video, sound and smell analytics working together just as humans use them.
